Here are some possible routes to compliance:

**Green Open Access**
Authors can choose to publish their work behind the subscription paywall without charge. They have the right to deposit the Author Original Manuscript in a repository immediately upon publication of the Version of Record. They can also deposit the Author Accepted Manuscript after an embargo period.

**Gold Open Access**
Upon payment of a one-off article publishing charge (APC) a paper is made open access online. Some funders, including the Wellcome Trust have specific licence conditions attached to this open access route (for example the Creative Commons Attribution (CC BY) licence). Please check funder’s policies around licensing before submitting your manuscript.

**Mandate Case Studies**
Research Councils UK

In July 2012 the Research Councils announced a new open access policy. Building on open access mandates previously adopted, the new policy, which takes effect in April 2013, mandates that all RCUK funded research articles be published open access, either via the gold or the green route. If publishing via the gold route, authors must publish under a Creative Commons Attribution (CC-BY) licence. A decision tree for RCUK authors, which explains the options available, is below:
To comply with the RCUK mandate:

- Check first to see if one of our Open Journals or a journal offering our Open Select option is suitable for publishing your article in.
- Submit your manuscript, noting that the research has been funded by RCUK and providing grant numbers where possible.
- If applicable, provide a statement on how any underlying research materials (e.g. datasets) can be accessed.
- Note the advice below whether publishing via the gold or green open access route.

**Gold Open Access** (Open and Open Select journals)

- Open journals – papers will be published upon payment of the APC under a CC-BY licence.
- Open Select – choose to publish under a CC-BY licence.

**Green Open Access** (Open Select or subscription journals)

- Check that the journal adheres to RCUK-permitted embargo times by clicking here. More than 90% of our journals adhere to the embargo policy.

National Institute of Health

On December 26, 2007, President Bush signed a spending Bill that requires the US National Institutes of Health (NIH) to mandate open online access to all research it funds.

The Bill stipulates that investigators funded by the NIH submit their peer-reviewed manuscripts to the National Library of Medicine’s open access repository PubMed Central when the manuscript is accepted for publication. The manuscript would then become openly available via PubMed Central within 12 months of publication in a journal.

To comply with the NIH policy (Green or Gold Open Access):

- Check first to see if one of our Open Journals or a journal offering our Open Select option is suitable for publishing your article in.
- Submit your manuscript, noting that the research has been funded by NIH and providing grant numbers where possible.

Taylor & Francis automatically deposits NIH-funded articles to PubMed Central, within twelve months of the article being published. Find out more here.
